Testing Laboratory Name Shenzhen HUAK Testing Technology Co., Ltd.

Heping Community, Fuhai Street, Bao' an District, Shenzhen, China

Applicant's name...... Wuhan Tianyu Information Industry Co., Ltd.

Address HUST Industry Park, East-Lake Development Zone, Wuhan 430223,

Hubei, China

Test specification:

FCC CFR Title 47 Part 2, Part 27

EIA/TIA 603-D: 2010 Standard ANSI C63.26:2015

KDB971168 D01: v03r01

TRF Originator....... Shenzhen HUAK Testing Technology Co., Ltd.

Test item description: Smart POS

Trade Mark: N/A

Manufacturer...... Wuhan Tianyu Information Industry Co., Ltd.

Model/Type reference..... P20L Listed Models N/A

Modulation Type QPSK, 16QAM

Rating DC 3.7V From Battery; DC5V/2A From USB

Hardware version RC-LS501 E2.1

Software version : V1.00

Result..... PASS

1 TEST STANDARDS

The tests were performed according to following standards:

FCC Part 27: MISCELLANEOUS WIRELESS COMMUNICATIONS SERVICES

TIA/EIA 603 D June 2010:Land Mobile FM or PM Communications Equipment Measurement and Performance Standards.

FCC Part 2: FREQUENCY ALLOCA-TIONS AND RADIO TREATY MAT-TERS; GENERAL RULES AND REG-ULATIONS

KDB971168 D01:v03r01

MEASUREMENT GUIDANCE FOR CERTIFICATION OF LICENSED DIGITAL TRANSMITTERS

ANSI C63.26:2015: American National Standard for Compliance Testing of Transmitters Used in Licensed Radio Services

2 SUMMARY

2.1 General Remarks

Date of receipt of test sample	:	Feb.18, 2019
Testing commenced on	:	Feb. 18, 2019
Testing concluded on	:	Mar. 20, 2019

2.2 Product Description

The **Wuhan Tianyu Information Industry Co., Ltd.**'s Model: P20Lor the "EUT" as referred to in this report; more general information as follows, for more details, refer to the user's manual of the EUT.

Name of EUT	Smart POS
Model/Type reference:	P20L
List Model:	1
Power supply:	DC 3.7V From Battery
Adapter Information	DC5V/2A From USB
Modilation Type	QPSK,16QAM
Antenna Type	Internal Antenna
Antenna Gain	-1.01dBi
Operation Frequency Band	LTE Band 41
Operation frequency	LTE Band 41: 2557.5~2652.5 MHz
LTE Release	R8
Extreme temp. Tolerance	-30°C to +50°C
Extreme vol. Limits	3.40VDC to 4.20VDC (nominal: 3.70VDC)

2.3 Equipment under Test

Power supply system utilised

Power supply voltage	:	0	120V/ 60 Hz	0	115V/60Hz
		0	12 V DC	0	24 V DC
		•	Other (specified in blank bel	ow))

DC 3.7V From Battery; DC5V/2A From USB

2.4 Short description of the Equipment under Test (EUT)

2.4.1 GeneralDescription

P20L is subscriber equipment in the LTE system. LTE frequency band is band 41; The Smart POS implements such functions as RF signal receiving/transmitting, LTE protocol processing, voice, video MMS service, etc. Externally it provides micro SD card interface, earphone port (to provide voice service) and SIM card interface.

Page 7 of 53 Report No.: HK1902190264-1E

2.5 Normal Accessory setting

Fully charged battery was used during the test.

2.6 EUT configuration

The following peripheral devices and interface cables were connected during the measurement:

- supplied by the manufacturer
- O supplied by the lab

0	Power Cable	Length (m):	1
		Shield :	1
		Detachable :	1
0	Multimeter	Manufacturer:	1
		Model No.:	1

2.7 Related Submittal(s) / Grant (s)

This submittal(s) (test report) is intended for FCC ID: 2ALKI-P20L filing to comply with FCC Part 27, Rules.

2.8 Modifications

No modifications were implemented to meet testing criteria.

2.9 GeneralTest Conditions/Configurations

2.9.1 TestEnvironment

Environment Parameter	Selected Values During Tests			
Relative Humidity	Ambient			
Temperature	TN	Ambient		
	VL	3.40V		
Voltage	VN	3.70V		
	VH	4.20V		

NOTE:VL=lowerextreme testvoltage VN=nominalvoltage VH=upperextreme testvoltage TN=normaltemperature

Page 8 of 53 Report No.: HK1902190264-1E

3 TEST ENVIRONMENT

3.1 Address of the test laboratory

Test Firm : Shenzhen HUAK Testing Technology Co., Ltd.

Address 1F, B2 Building, Junfeng Zhongcheng Zhizao Innovation

Park, Fuhai Street, Bao'an District, Shenzhen City, China

FCC designation number : CN1229

test firm registration number: 616276

3.2 Test Description

Test Item	FCCRuleNo.	Verdict	
Effective(Isotropic)RadiatedOutputPower	Part 2.1046 27.50(h)(2)	Pass	
Peak-AverageRatio	Part 2.1046	Pass	
ModulationCharacteristics	§2.1047	N/A	
Bandwidth	Part 2.1049	Pass	
BandEdgesCompliance	Part 2.1051 27.53(m)	Pass

4 TEST CONDITIONS AND RESULTS

4.1 Output Power

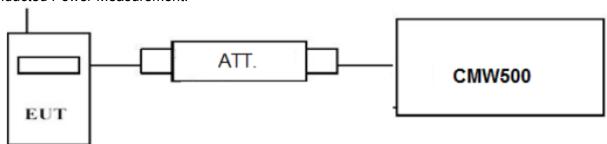

4.1.1 Coducted Output Power

TEST APPLICABLE

Part 27.50(h)(2), during the process of testing, the EUT was controlled via R&S Digital Radio Communication tester (CMW500) to ensure max power transmission and proper modulation. This result contains output power measurements for the EUT. In all cases, output power is within the specified limits.

TEST CONFIGURATION

Conducted Power Measurement:

TEST PROCEDURE

Conducted Power Measurement:

- a) Place the EUT on a bench and set it in transmitting mode.
- b) Connect a low loss RF cable from the antenna port to a CMW500 by an Att.
- c) EUT Communicate with CMW500 then selects a channel for testing.
- d) Add a correction factor to the display CMW500, and then test.

TEST RESULTS

4.1.2. Radiated Output Power

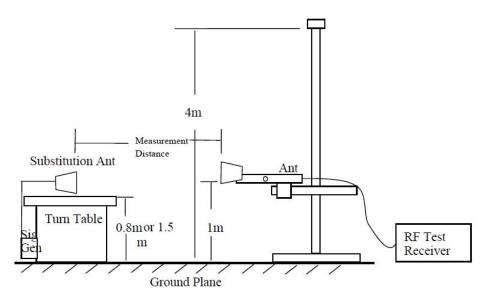

LIMIT

This is the test for the maximum radiated power from the EUT.

TEST CONFIGURATION

Radiated Power Measurement:

remark: 0.8m for below 1GHz, 1.5m for above 1GHz

TEST PROCEDURE

The EUT was setup according to EIA/TIA 603D

 The EUT shall be placed at the specified height on a support, and in the position closest to normal use as declared by provider.

Report No.: HK1902190264-1E

- b. The test antenna shall be oriented initially for vertical polarization and shall be chosen to correspond to thefrequency of the transmitter
- c. The output of the test antenna shall be connected to the measuring receiver.
- d. The transmitter shall be switched on and the measuring receiver shall be tuned to the frequency of the transmitter under test.
- e. The test antenna shall be raised and lowered through the specified range of height until a maximum signal level is detected by the measuring receiver.
- f. The transmitter shall then be rotated through 360° in the horizontal plane, until the maximum signal level is detected by the measuring receiver.
- g. The test antenna shall be raised and lowered again through the specified range of height until a maximum signal level is detected by the measuring receiver.
- h. The maximum signal level detected by the measuring receiver shall be noted.
- i. The transmitter shall be replaced by a substitution antenna.
- j. The substitution antenna shall be orientated for vertical polarization and the length of the substitution antenna shall be adjusted to correspond to the frequency of the transmitter.
- k. The substitution antenna shall be connected to a calibrated signal generator.
- I. If necessary, the input attenuator setting of the measuring receiver shall be adjusted in order to increase the sensitivity of the measuring receiver.
- m. The test antenna shall be raised and lowered through the specified range of height to ensure that the maximum signal is received.
- n. The input signal to the substitution antenna shall be adjusted to the level that produces a level detected by the measuring receiver, that is equal to the level noted while the transmitter radiated power was measured, corrected for the change of input attenuator setting of the measuring receiver.
- o. The measurement shall be repeated with the test antenna and the substitution antenna orientated for horizontal polarization.
- p. The measure of the effective radiated power is the larger of the two levels recorded at the input to the substitution antenna, corrected for gain of the substitution antenna if necessary.
- q. Test site anechoic chamber refer to ANSI C63.4.

Page 14 of 53 Report No.: HK1902190264-1E

TEST RESULTS

EUT:	Smart POS	Test Date:	Feb. 19, 2019
Temperature:	25 ⁰ C	Tested by:	Gary Qian
Humidity:	55 % RH	Test Voltage	Normal Voltage
Operation Mode:	Normal Voltage- Tx Mode		

Radiated Measurement:

Remark:

- 1. We measured all RB Configuration refer 3GPP TS136 521 for each Channel Bandwidth of LTE Band 41; recorded worst case for each Channel Bandwidth of LTE Band 41.
- 2. $EIRP=P_s(dBm)-P_{cl}(dB)+G_a(dBi)$
- 3. We measured both Horizontal and Vertical direction, recorded worst case direction.

4.2 Peak-to-Average Ratio (PAR)

LIMIT

The Peak-to-Average Ratio (PAR) of the transmission may not exceed 13 dB.

TEST CONFIGURATION

TEST PROCEDURE

- 1. Refer to instrument's analyzer instruction manual for details on how to use the power statistics/CCDF function:
- 2. Set resolution/measurement bandwidth ≥ signal's occupied bandwidth;
- 3. Set the number of counts to a value that stabilizes the measured CCDF curve;
- 4. Set the measurement interval as follows:
 - 1). for continuous transmissions, set to 1 ms,
 - 2). for burst transmissions, employ an external trigger that is synchronized with the EUT burst timing sequence, or use the internal burst trigger with a trigger level that allows the burst to stabilize and set the measurement interval to a time that is less than or equal to the burst duration.
- 5. Record the maximum PAPR level associated with a probability of 0.1%.

4.3 Occupied Bandwidth and Emission Bandwidth

LIMIT

N/A

TEST CONFIGURATION

TEST PROCEDURE

The transmitter output was connected to a calibrated coaxial cable and coupler, the other end of which was connected to a spectrum analyzer. The occupied bandwidth was measured with the spectrum analyzer at low. middle and high channel in each band. The -26dBc Emission bandwidth was also measured and recorded. Set RBWwas set to about 1% of emission BW, VBW≥3 times RBW.

-26dBc display line was placed on the screen (or 99% bandwidth), the occupied bandwidth isthe delta frequency between the two points where the display line intersects the signal trace.

4.4 Band Edge compliance

LIMIT

the power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least $40 + 10 \log P \, dB \, (-10 \, dBm, \, 100 \, nW)$ on all frequencies between the channel edge and 5 MHz from the channel edge, $43 + 10 \log P \, dB \, (-13 \, dBm, \, 50 \, nW)$ on all frequencies between 5 MHz and X MHz from the channel edge, and $55 + 10 \log P \, dB \, (-25 \, dBm, \, 3 \, nW)$ on all frequencies more than 20 MHz from the channel edge, where X MHz is the greater of 6 MHz or the actual emission bandwidth (26 dB).

TEST CONFIGURATION

TEST PROCEDURE

- 1. The transmitter output port was connected to base station.
- 2. The RF output of EUT was connected to the power meter by RF cable and attenuator, the path loss was compensated to the results for each measurement.
- 3. Set EUT at maximum power through base station.
- 4. Select lowestand highest channels for each band and different modulation.
- 5. Measure Band edge using RMS (Average) detector by spectrum
- 6. Set RBW = 100 kHz, VBW=300 kHz, Span=50MHz Peak Detector.
